

Demonstration of Proposed Features

Date	2 July, 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	1 Mark

Demonstration of Proposed Features:

This document captures all the features proposed during the project planning phase and verifies whether they were successfully implemented and demonstrated in the Credit Card Approval Prediction system.

S.No	Feature Name	Description	Status (Implemented / Partial / Pending)	Demonstrated (Yes / No)	Remarks
1	Multi-Algorithm Comparison	Implements and compares Logistic Regression, Random Forest, XGBoost, and Decision Tree using Scikit-learn.	Implemented	Yes	XGBoost identified as best performer.
2	Binary Risk Labeling	Handles multi-class payment status by converting into 'high risk' vs 'low risk' labels.	Implemented	Yes	Labels effectively trained the model.
3	Flask Web Interface	User-friendly web app for real-time input by analysts, officers, and customers.	Implemented	Yes	Responsive UI built with Flask.
4	Cloud Deployment	Deployment of the best-performing model using IBM Watson Machine Learning for scalability.	Implemented	Yes	Scalable API endpoints verified.
5	Model Explainability	Inclusion of SHAP values and feature importance plots to drive transparency in decisions.	Implemented	Yes	Visual importance plots functional.

6	Customer Sandbox Mode	A dedicated environment for customers to test financial scenarios before formal application.	Implemented	Yes	Allows 'what-if' analysis seamlessly.
