

Project Initialization and Planning Phase

Date	14 July 2026
Project Name	Automated Credit Card Application Screening
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

The project focuses on solving the lack of transparency and long waiting times for credit card applicants. Using a real-time ML model, we empower users with a "Sandbox Mode" to understand their chances and get instant AI-driven results.

I am (New Applicant)	I'm trying to (get credit approval)	But (requirements are unclear)	Because (scoring is hidden)	Which makes me feel (unconfident and anxious)
---------------------------------------	--	---	--	--

PS	I am	I'm trying to	But	Because	Which makes me feel
PS-1	Individual Applicant	Understand my eligibility for a credit card and get an instant decision.	Traditional bank applications are a "black box" where I wait weeks only to be potentially rejected without reason.	Legacy screening processes do not explain which financial features (like loan balance or income type) led to the final outcome.	Discouraged from applying and frustrated by the lack of clear financial feedback.
