Project Name	Automated Credit Card Application Screening
Maximum Marks	2 Marks

Customer Journey Map

An enhanced mapping of the customer journey, specifically tailored to the real-time AI-driven screening process, including transparency features and sandbox testing environments.

Phase of Journey	Stage 1: Pre-Submission	Stage 2: Real-time Analysis	Stage 3: Decision & Logic
Actions	Tests scenarios in Sandbox Mode; Enters financial credentials	IBM Watson ML processes data via calibrated XGBoost model	Views final decision alongside SHAP importance plots
Touchpoint	Flask Customer Interface / Web Portal	Cloud-based Prediction Engine API	Decision Dashboard / Explanation View
Customer Thought	"Does my employment duration offset my debt levels?"	"I hope the system is objective and accurate."	"The SHAP plot makes it clear why my income was the key factor."
Customer Feeling	Empowered, Proactive	Expectant, Concerned about bias	Satisfied with transparency (regardless of outcome)
Process Ownership	UI/UX and Customer Success	Data Science & Backend Engineering	Compliance & Financial Analysts
Improvement Opportunities	Include helpful tooltips for complex financial fields	Minimize latency in model response via caching	Automatic escalation for borderline cases to local officers
